

# Package ‘ovganet’

September 4, 2023

**Type** Package

**Title** Overlapping Group Elastic Net Using OEM

**Version** 1.0.0

**Author** Haosen He, Alison Morantz

**Maintainer** Haosen He <hehaosen@law.stanford.edu>

**Description** Performs (overlapping) (group) elastic net regularization for linear and binomial models using Orthogonalizing EM with flexible options for penalization.

**Depends** R (>= 4.2.2), Matrix, oem, bigmemory

**License** GPL-3

**Encoding** UTF-8

**LazyData** true

**RoxygenNote** 7.2.3

## R topics documented:

---

cv.ovganet

---

*Cross-validated overlapping group elastic net using package 'oem'*

---

## Description

Cross-validated overlapping group elastic net using package 'oem'

## Usage

```
cv.ovganet(
  X,
  y,
  group,
  weights = NULL,
  alpha = 1,
  type.measure = "deviance",
  family = c("gaussian", "binomial"),
  ...
)
```

## Arguments

X	Design matrix (features). Note that the "oem" package we use is optimized for $n \gg p$ settings.
y	Response vector (outcomes).
group	A list of vectors containing group information.
weights	A vector of weights for each group.
alpha	Mixing value for elastic.net.
type.measure	Measure to evaluate for cross-validation. The default is type.measure = "deviance." See package "oem" for more options.
family	Use "gaussian" for least squares problems and "binomial" for binary response.
...	other parameters to be passed to "cv.ovganet" function.

## Value

An object with S3 class "cv.ovganet".

## Examples

```
library(doMC)
library(ovganet)
registerDoMC(5)
cv_overlap_grp_lasso <- cv.ovganet(X = X, y = y, group = group, weights = group_weights, family = 'binomial', par
```

---

expandMat	<i>Expand a matrix of predictors to a matrix of latent variables.</i>
-----------	---

---

**Description**

Expand a matrix of predictors to a matrix of latent variables.

**Usage**

```
expandMat(X, group)
```

**Arguments**

X	Design matrix (features).
group	A list of vectors containing group information.

**Value**

A sparse matrix with all latent variables included

---

gamma2beta	<i>Convert latent variable coefficients (gammas) to variable coefficients (betas)</i>
------------	---

---

**Description**

Convert latent variable coefficients (gammas) to variable coefficients (betas)

**Usage**

```
gamma2beta(gamma, incidence.mat, grp.vec, family)
```

**Arguments**

incidence.mat	Incidence matrix
grp.vec	A vector indicating group membership
family	"gaussian" for least squares problems and "binomial" for binary response.
X	Design matrix (features).

**Value**

A vector of lasso coefficients.

---

incidenceMat	Create an incidence matrix indicating group membership
--------------	--

---

### Description

Create an incidence matrix indicating group membership

### Usage

```
incidenceMat(X, group)
```

### Arguments

X	Design matrix (features).
group	A list of vectors containing group information.

### Value

A sparse matrix with all latent variables included

### Examples

To be filled in.

---

ovganet	Overlapping group elastic net using package 'oem'
---------	---

---

### Description

Overlapping group elastic net using package 'oem'

### Usage

```
ovganet(  
  X,  
  y,  
  group,  
  weights = NULL,  
  alpha = 1,  
  family = c("gaussian", "binomial"),  
  ...  
)
```

**Arguments**

X	Design matrix (features). Note that "oem" is optimized for $n \gg p$ settings.
y	Response vector (outcomes).
group	A list of vectors containing group information.
weights	A vector of weights for each group.
alpha	Mixing value for elastic.net.
family	Use "gaussian" for least squares problems and "binomial" for binary response.
...	other parameters to be passed to "cv.ovganet" function.

**Value**

An object with S3 class "ovganet".

**Examples**

```
library(ovganet)
overlap_grp_lasso <- ovganet(X = X, y = y, group = group, weights = group_weights, family = 'binomial')
```

---

plot.cv.ovganet	<i>Plot method for cv.ovganet</i>
-----------------	-----------------------------------

---

**Description**

Plot method for cv.ovganet

**Usage**

```
## S3 method for class 'cv.ovganet'
plot(obj, ...)
```

**Arguments**

obj	An object of class 'cv.ovganet'
...	Additional arguments to be passed to the plot function of 'plot.cv.oem'

---

plot.ovganet	<i>Plot method for ovganet plotting (coef. path)</i>
--------------	--

---

**Description**

Plot method for ovganet plotting (coef. path)

**Usage**

```
## S3 method for class 'ovganet'
plot(obj, ...)
```

**Arguments**

obj	An object of class 'ovganet'
...	Additional arguments to be passed to the plot function of 'plot.oem'

---

predict.cv.ovganet	<i>Predict method for cv.ovganet</i>
--------------------	--------------------------------------

---

**Description**

Predict method for cv.ovganet

**Usage**

```
## S3 method for class 'cv.ovganet'  
predict(obj, newx, ...)
```

**Arguments**

obj	An object of class 'cv.ovganet'
newx	New data to predict from. If not provided, will use the data from the original fit.
...	Additional arguments to be passed to the predict function of 'predict.cv.oem'

**Value**

Predicted values based on the 'cv.ovganet' object

---

predict.ovganet	<i>Predict method for ovganet</i>
-----------------	-----------------------------------

---

**Description**

Predict method for ovganet

**Usage**

```
## S3 method for class 'ovganet'  
predict(obj, newx, ...)
```

**Arguments**

obj	An object of class 'ovganet'
newx	New data to predict from. If not provided, will use the data from the original fit.
...	Additional arguments to be passed to the predict function of 'predict.oem'

**Value**

Predicted values based on the 'ovganet' object

---

summary.cv.ovganet	<i>Summary method for cv.ovganet</i>
--------------------	--------------------------------------

---

**Description**

Summary method for cv.ovganet

**Usage**

```
summary.cv.ovganet(obj, ...)
```

**Arguments**

obj	An obj of class 'cv.ovganet'
...	Additional arguments to be passed to the summary function of 'summary.cv.oem'

**Value**

A summary obj for 'cv.ovganet'

---

summary.ovganet	<i>Summary method for ovganet</i>
-----------------	-----------------------------------

---

**Description**

Summary method for ovganet

**Usage**

```
summary.ovganet(obj, ...)
```

**Arguments**

obj	An obj of class 'ovganet'
...	Additional arguments to be passed to the summary function of 'summary.oem'

**Value**

A summary obj for 'ovganet'
